

Safety Assurance

Our Safety Capability

Safety Management Systems (SMS):

- SMS advice, development and implementation;
- Development and delivery of safety artefacts, including Safety Management Programme (SMP) plans, Safety Case Reports and supporting analysis and evidence;
- Organisational safety and safety culture;
- Continuous improvement in safety performance through-life

Safety Assessment and Analysis:

- Quantitative and Qualitative Risk Assessment
- Hazard Logs and associated supporting analysis and evidence
- ALARP analysis and justifications

Independent review and advice:

- Independent Safety Audit (ISA) and Independent Safety Assessment
- Independent systems safety assurance strategy reviews and advice

Our Approach

- We draw out the most **critical issues** and **dependencies** so that they are actively managed from the start.
- We work with clients to find the most appropriate balances between safety and practicality whilst still meeting required safety standards.
- We tailor safety support solutions to our clients' programme milestones and safety management systems.

Benefits

Legislative & Regulatory Requirements

Ensure your asset is compliant with safety regulations and legislation to de-risk rejection from client/end-user

Functional and Safe

We look to balance both safety requirements and practicality to provide our clients with confidence that their assets are safe without sacrificing functionality.

Through-life safety support

Safety management approaches that deliver safety compliance and management efficiency, from concept to disposal.
